BRIGHT TV ANALYSIS OVERVIEW

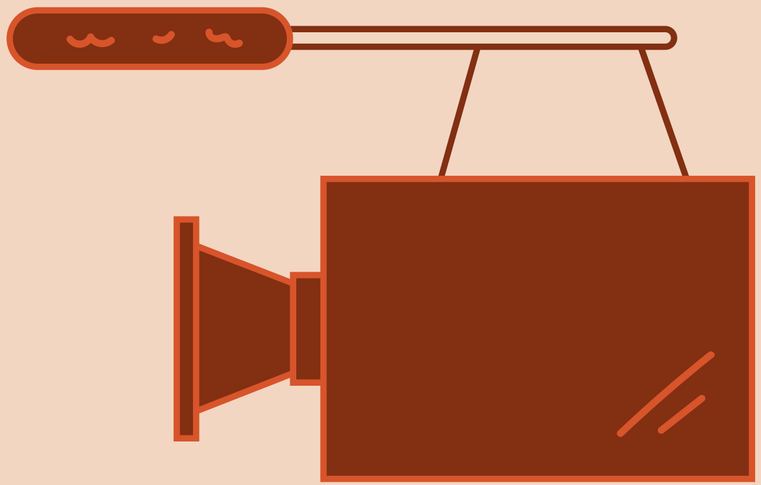
CONTENT

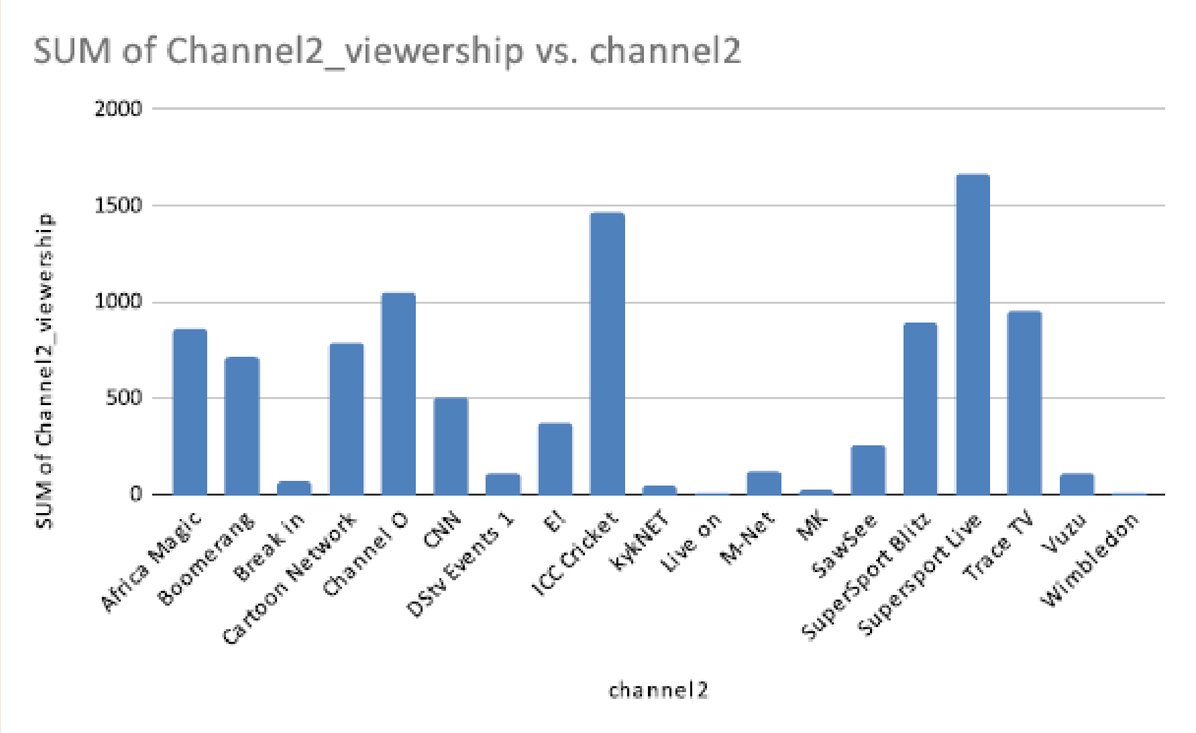


Introduction

- Data Systems
- Analysis
- Recommendation
- Implementation Plan
- Q&A

BrightTV is a digital streaming platform aiming to grow its user base, increase engagement, and optimise content performance. The analysis uses user-level and activity data (UserID, Channel2, RecordDate2, Age, Province, etc.) to understand who the users are, how they behave, and where growth opportunities exist.

MOST VIEWED SHOWS BY USERS



How Film Shapes Our Perception of Identity

Viewership is heavily concentrated in the top channels, indicating strong user preference but also a dependency risk. Underperforming channels show low engagement and may require content optimisation or replacement.

The danger of single stories

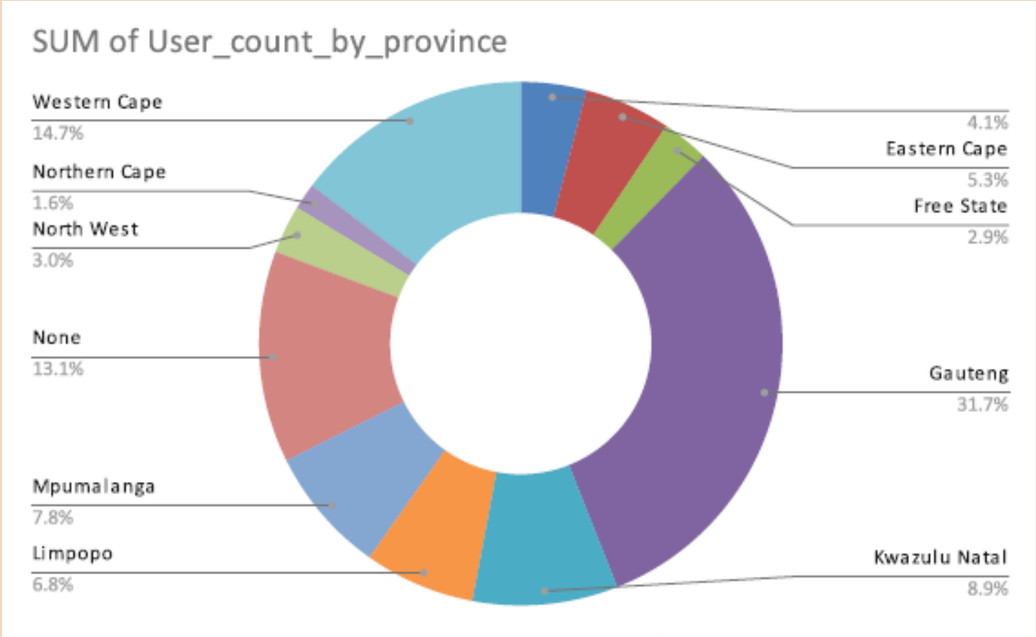
Shift toward more inclusive representation

Repeated portrayals

VIEWERSHIP BY PROVINCE

Which Province Consumes The Most TV Programmes

The “top province” shows where your platform is strongest,
but real insight comes from comparing volume vs engagement.



Gauteng contributes the highest total viewership, making it the primary market. However, when adjusted for users, another province may show higher engagement per user, indicating a more loyal audience segment. Low-viewership provinces are growth opportunities, not failures — but only if you target them differently instead of applying a one-size-fits-all strategy.

ADVANTAGES

Advantages of Bright TV Analysis

Audience Segmentation: UserId allows precise tracking of who is watching, enabling personalized insights.

Channel Performance: Comparing watch time across channels highlights which content streams drive engagement.

Time-Based Trends: RecordDate2 enables daily, weekly, and monthly analysis, showing peaks and troughs in viewership.

Programme Popularity: Identifies top-performing shows (e.g., Morning Live, Pimville) and their impact on overall engagement.

Data-Driven Decisions: Provides stakeholders with clear KPIs (daily watch time, channel comparisons, retention rates).

DISADVANTAGES

Disadvantages / Challenges

Data Volume & Complexity: Large datasets can be difficult to process without advanced tools (SQL, cloud analytics).

Data Quality Issues: Incomplete or inconsistent records may distort insights if not cleaned properly.

Limited Context: Watch time alone doesn't explain why users engage or disengage — qualitative insights may be missing.

Competition: Streaming platforms may reduce traditional TV engagement, making Bright TV's analytics less predictive.

Stakeholder Interpretation: Non-technical stakeholders may misinterpret raw metrics without clear visualization and storytelling.

Programme Risk: Ending legacy shows (like Muvhango) could alienate loyal viewers, which analytics must capture and explain.

USERS PER RACE

Real insight = representation + engagement

Stakeholder Insights

Representation: Shows whether Bright TV is reaching diverse audiences equitably.

Content Strategy: Identifies which programmes resonate most with different racial groups.

Channel Strategy: Demonstrates how Channel 2's cultural programming attracts specific segments.

Balanced Engagement: Helps stakeholders see if Bright TV is inclusive or skewed toward certain groups.

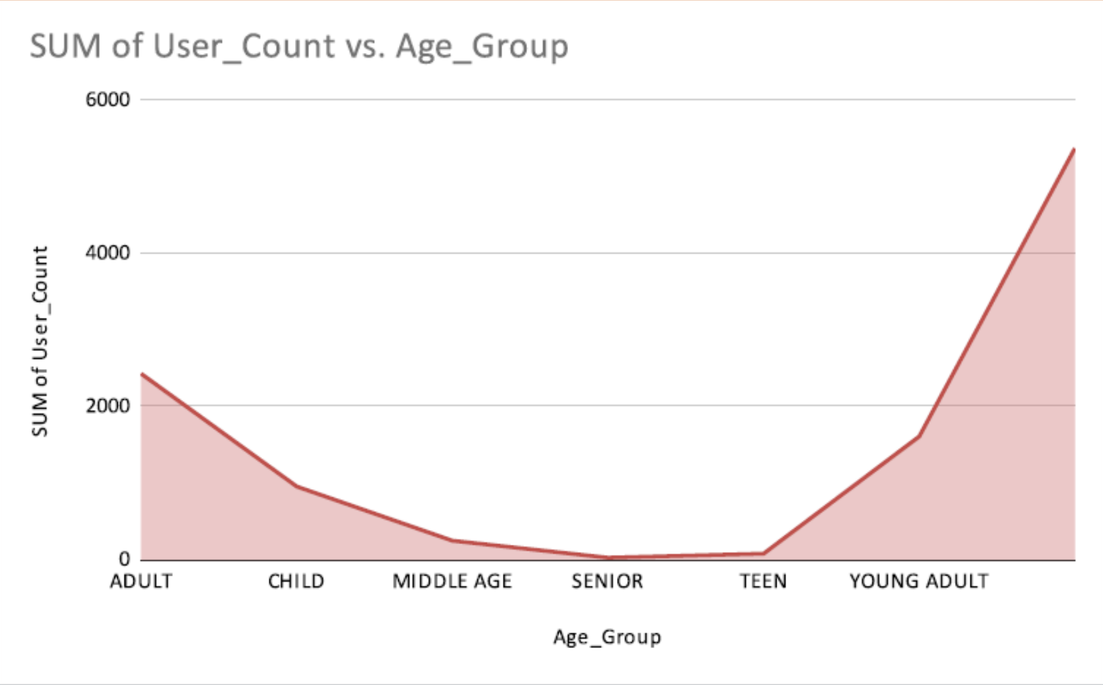
THE ALGORITHM BEHIND YOUR WATCHLIST

Count number of unique user profiles

Stakeholder Insights

- Representation: Demonstrates whether Bright TV is reaching audiences equitably across genders.
- Content Strategy: Identifies which programmes resonate more strongly with specific gender groups.
- Channel Strategy: Shows how Channel 2's cultural and youth-focused content attracts different demographics.
- Balanced Engagement: Helps stakeholders see if Bright TV is inclusive or skewed toward certain groups.

USER COUNT VS AGE GROUP



How Streaming Platforms Been Consumed By Age Group

1. Overview (What the Data Says)

From your chart:

- Young Adults dominate → largest user base
- Adults are second → stable supporting segment
- Teens, Middle Age, Seniors are very low underrepresented

2.Interpretation:

BrightTV is heavily skewed toward a young adult audience, with weak penetration in other age groups.

Key Issues Identified

1. Overdependence on Young Adults
   - Risk if engagement drops
   - Limits platform diversity
2. Weak Pipeline (Teens)
   - Future users are not being captured early
3. Untapped Older Market
   - Middle-aged and seniors almost absent
   - Missed revenue and retention opportunities

Insights

- Engagement Balance:
  - If male and female watch times are close, Bright TV is achieving inclusive engagement.
  - If skewed, it highlights a content bias (e.g., certain programmes resonate more with one gender).
- Programme Strategy:
  - Morning Live may attract balanced audiences.
  - Pimville or Lokshin Loud might skew toward one gender, revealing cultural or entertainment preferences.
- Channel Strategy:
  - Channel 2's youth and cultural focus could show stronger female engagement in dramas, or male engagement in sports/music.
  - Comparing across channels helps stakeholders see where gender differences are most pronounced.
- Business Value:
  - Demonstrates Bright TV's ability to reach diverse audiences.
  - Provides evidence for advertiser targeting (e.g., brands wanting male-heavy or female-heavy audiences).
  - Supports programme commissioning decisions (invest more in content that balances or grows underrepresented gender segments).
